Description

After the addition of the "CC" POS tag in the list of POS tags in the generate_candidates function, we saw that "optional or positional arguments" was getting tagged to the "option arguments" document. They are unrelated the linked document talks about command-line arguments whereas the context of the KP in the tagged document is related to function parameter/argument.

To unlink them, we can try the following ideas:

1. Check the vector similarity of the words "option" & "optional"
2. Check wordnet similarity of the words "option" & "optional"

Out of the best idea, try to test it full books of Library Reference, C-API, Whirlwind, Tutorial.
