

## RK-A - Feature #1811

Feature # 1809 (Resolved): Checking the context of the KP matched with "word1.word2" header variant

### For matching "word1" in with the KP, make use of token\_processing function

<b>Description</b>			
<p>To check whether "word1" of header variant "word2.word1" is matching to the KP which is getting tagged or not, we should use the token_processing function. This function removes all the extra symbols from the end &amp; beginning of the strings passed to it and returns a lemmatized form of the string that can be used.</p> <p>This will help us make sure that cases like KP = sockets and header variant = imap4.socket can be mapped without any extra processing.</p>
