Target version:	P1		**Spent time:**	0.00 hour

Description

"more elaborate" KP was getting tagged in HowTos book. The header guilty for it was "more elaborate multiprocessing". We need to make sure if any header or header variants are starting with words like "more", "other", "new", let us discard them. To do that you check if the starting word of the header_var is ADJ/ADV and the singular/plural form of the first word is within CW_50. If yes, discard that word.

Meaning "new types" will become "types", "more elaborate multiprocessing" will become "elaborate multiprocessing", etc.
