Category:		Estimated time:	1.00 hour
Target version:	1-RK-J-1	Spent time:	1.00 hour
Description			
<p>This is the first task for a new product based on browser extension. Need a simple chrome extension that does the following while on just one site - namely, youtube.com: 1. extract URL U of the current page. 2. make a call to a site with U as input. This will return list[s, list[sh,u]]. u is a url. Example output: s1,[sh11,u11],[sh12,u12], [s2,[sh21,u21]], [s3,[sh31,u31],[sh32,u32],[sh33,u33]]. 3. If the list is not null, show each of these in different lines as shown below either (a) between video description and comments on the same page or (b) in a very simple GUI modal. Clicking on u should open a chrome/window tab with that URL u.</p> <p>Please put the following in a purple box.</p> <p>List:</p> <ul style="list-style-type: none">- s1-- sh11: u11-- sh12: u12- s2-- sh21: u21- s3-- sh31: u31-- sh32: u32-- sh33: u33 <p>Some notes:</p> <ul style="list-style-type: none">- Minimize the size of the extension.- Minimize access permissions required.- Should take minimal resources and run in the background and show results only when available.- Based on mv3 (https://developer.chrome.com/docs/extensions/mv3/intro/)- Please provide instructions to edit, build and upload to Chrome Web Store.
