Description			
Since we are sending the results for the entire video, we do not want to send pointers to the same video.			
Suppose a document corresponding to U1&t=xs has a purple link with results pointing to U1&t=ys and U2&t=zs, result should only contain U2&t=zs and not U1&t=ys.			
Suppose a purple link contains results to only the same video, then dont even send that purple link because the purple link will not have any results anyway.
