Description			
Today, to create extension that works with Dev or Prod, we have to change the server name in multiple places in 2 files. Please change code so that we can make the change in one place instead.

Place the domain name as a constant at one place & use that constant everywhere. Suppose in the current extension, every server url in the script file points to the QA server i.e. <https://edutestqa.appspot.com>

Let's make a constant for this at one place from we can manage and use it everywhere.

Review Point: create a new file called config.js, and declare the domain name there only, so that we can use that constant in other files too
