Description

Today, the user can add "<regex>" to list of regexes and if these regexes are present in the requested o-url, showCopilot is returned as true in the API response.

Please add support for user to add "-<regex>" to the list. In this case, if this regex is present in the requested o-url, showCopilot should be returned as false in the API response.

So, example could be ["*007*", "-/", "-/pricing", "-/about", "-/contact", "-/blog*", "-/*badminton*"]. In this case, showCopilot would be returned as false for

- fqdnp/
- fqdnp/pricing
- fqdnp/about
- fqdnp/contact
- fqdnp/blog
- fqdnp/blog123
- fqdnp/top-5-best-badminton-racket-under-1500-playos-ultimate-guide/
- fqdnp/classes/objects/blog123

but true for

- fqdnp/classes/what007/modules
- fqdnp/blog007
- fqdnp/blog-what-is-ai-007

[Note : if both "-<regex>" and "*<regex>*" are present in the URL, and we can prioritize "*<regex>*" over "-<regex>" and return true based on the "*<regex>*" condition.]

where fqdnp is meant to be <http://domainName> or <https://domainName>.
