Description

Create blueprints *openai*, *qna*

Shift the call_openai_api, set_openai_key, set_prompt_mods, set_kb inside *openai* blueprint.

store_text_file, crud_ds, get_file, set_questions_list, get_questions_list, get_question inside *qna* blueprint.

And register these blueprint in flask application.

(Note- You can take help from this article to create blueprint [[
