Description			
3772 colab has support to get detailed answers to MCQs. This ticket is to convert non-MCQ questions to MCQs.			
As you know, inputFile contains values of keys such as "prefix-question", "prompt-5" etc. Add another key "answer-choice-creation-prompt-prefix-5". Suppose <accpp5-value> is the value, and <content> is the text below the "\$Exercise:" line in standard.txt.			
Before processing a non-MCQ question, please do the following:			
1. make the call to openai with prompt as "<accpp5-value> <content>". [As always, add support for True and False values for call_real_api.]			
2. The response will be of the format "Choices are #\$. <choice 1> #\$. <choice 2> #\$. <choice 3> #\$. <choice 4> #\$. #\$. correct choice: <correct-choice as in one of a, b, c or d>".			
3. Convert the non-MCQ question as an MCQ with the above information.			
4. Continue processing; however, do not add the above conversation to future conversation.
